```
40 flutter_test:
41   sdk: flutter
42
43 # The "flutter_lints" package below contains a set of recommended lints to
44 # encourage good coding practices. The lint set provided by the package is
45 # activated in the `analysis_options.yaml` file located at the root of your
46 # package. See that file for information about deactivating specific lint
47 # rules and activating additional ones.
48 flutter_lints: ^2.0.0
49
50 # For information on the generic Dart part of this file, see the
51 # following page: https://dart.dev/tools/pub/pubspec
52
53 # The following section is specific to Flutter packages.
54 flutter:
55   # The following line ensures that the Material Icons font is
56   # included with your application, so that you can use the icons in
57   # the material Icons class.
58   uses-material-design: true
59
60   # To add assets to your application, add an assets section, like this:
61   # assets:
62   #   - images/a_dot_burr.jpeg
63   #   - images/a_dot_ham.jpeg
64
65   # An image asset can refer to one or more resolution-specific "variants", see
66   # https://flutter.dev/assets-and-images/#resolution-aware
```

Users > Alunos > Desktop > AV08 > pubspec.yaml

environment:

sdk: ">=2.17.6 <3.0.0"

Dependencies specify other packages that your package needs in order to work.
To automatically upgrade your package dependencies to the latest versions
consider running `flutter pub upgrade --major-versions`. Alternatively,
dependencies can be manually updated by changing the version numbers below to
the latest version available on pub.dev. To see which dependencies have newer
versions available, run `flutter pub outdated`.

dependencies:

flutter:

sdk: flutter

The following adds the Cupertino Icons font to your application.
Use with the CupertinoIcons class for iOS style icons.

cupertino_icons: ^1.0.2

http: ^0.13.5

dev_dependencies:

flutter_test:

sdk: flutter

The "flutter_lints" package below contains a set of recommended lints to
encourage good coding practices. The lint set provided by the package is
activated in the `analysis_options.yaml` file located at the root of your
that file for information about deactivating specific lint
ones.

```

```
name: obtendo_dados_com_flutter_http
```

```
description: A new Flutter project.
```

```
# The following line prevents the package from being accidentally published to  
# pub.dev using `flutter pub publish`. This is preferred for private packages.
```

```
publish_to: 'none' # Remove this line if you wish to publish to pub.dev
```

```
# The following defines the version and build number for your application.
```

```
# A version number is three numbers separated by dots, like 1.2.43
```

```
# followed by an optional build number separated by a +.
```

```
# Both the version and the builder number may be overridden in flutter
```

```
# build by specifying --build-name and --build-number, respectively.
```

```
# In Android, build-name is used as versionName while build-number used as versionCode.
```

```
# Read more about Android versioning at https://developer.android.com/studio/publish/versioning
```

```
# In iOS, build-name is used as CFBundleShortVersionString while build-number used as CFBundleVersion
```

```
